Sequence 49, Application US/09302681

Batent No. 6441149

GENERAL INFORMATION:
APPLICANT: Herrnstadt, Corrina
APPLICANT: Glosh, Sounitra S.
APPLICANT: Glosh, Sounitra S.
APPLICANT: Pahy, Eoin F.
ITILE OF INVENTION: DIAGNOSTIC METHOD BASED ON
ITILE OF INVENTION: QUANTIFICATION OF EXTRAMITOCHONDRIAL DNA
ITILE OF INVENTION: QUANTIFICATION OF EXTRAMITOCHONDRIAL DNA
ITILE OF INVENTION: QUANTIFICATION NUMBER: US/09/302,681

CURRENT APPLICATION NUMBER: US/09/302,681

CURRENT FILING DATE: 1999-04-30

NUMBER OF SEQ ID NOS: 108

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 49

LENGTH: 19

Fatent No. 630330.
GENERAL INFORMATION:
APPLICANT: Alexander Blinkovsky
APPLICANT: Alexander Blinkovsky
APPLICANT: Alexander Blinkovsky
APPLICANT: Alex Sloma
APPLICANT: Alen Sloma
APPLICANT: Maria Tang
APPLICANT: Mik.o Fujii
APPLICANT: Lene Vohke Kofod
TITLE OF INVENTION: Activity And Nucleic Acids Encoding Same
TITLE OF INVENTION: Activity And Nucleic Acids Encoding
CURRENT APPLICANTON: WURBER: 60/069719
EARLIER APPLICANTON NUMBER: 1997-12-16
EARLIER APPLICANTON NUMBER: PA 1998 00670
EARLIER APPLICANTON NUMBER: PA
US-9-122-104-5/C
Sequence 6, Application US/09192104B
Patent No. 6184020

1 Patent No. 5638612

2 GENREAL INFORMATION:

APPLICANT: Miteuhashi, Masato

APPLICANT: Cooper, Allan

1 TITLE OF INVENTION: Gene Detection System

NUMBER OF SEQUENCES: 726

CORRESPONDENCE ADDRESS:

ADDRESSES: KNOBBE, MARTENS, OLSON AND BEAR

STREET: CA

COUNTRY: USA

ZIP: 92660

COMPUTER READABLE FORM:

MEDIUM TYPE: CIPDPY disk

COMPUTER READABLE FORM:

MEDIUM TYPE: Ploppy disk

COMPUTER: IBM PC compatible

OPERATION SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION NUMBER: US/08/379,078

FILING DATE: 12-NOV-1992

ATPORNEY/AGENT INFORMATION:

APPLICANTION NUMBER: US 07/974,406

i Sequence 26, Application US/08940250

j Patent No. 601991

i GENERAL INPORANTION:

APPLICANT: Nicholas Dean, Muthiah Manoharan

TITLE OF INVENTION: Antisense Oligonuclectide Modulation

TITLE OF INVENTION: Antisense Oligonuclectide Modulation

TITLE OF INVENTION: Of MDR P-Glycoprotein Gene Expression

NUMBER OF SEQUENCES: 41

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                        ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 51, Application US/08746111

Patent No. 6066778
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
THILE OF INVENTION: Compositions And Methods For Screening
TITLE OF INVENTION: Compounds For Anticoagulant Activity
NUMBER OF SEQUENCES: 54
CORRESPONDENCE ADDRESS:
ADDRESSEE: Medlen & Carroll, LLP
STREET: 220 Montgomery Street, Suite 2200
CITY: San Francisco
STARET: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2; DB 1; Length 20; 4.8e+02;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3; Indela

Sequence 12, Application US/08469617

Patent No. 6201107

GENERAL INFORMATION:

APPLICANT: Riordan, John R.

APPLICANT: Rommens, John R.

APPLICANT: Rommens, John R.

APPLICANT: Rem, Bat-Sheva

APPLICANT: Arem, Bat-Sheva

APPLICANT: Arem, Bat-Sheva

APPLICANT: Buckwald, Manuel

TILE OF INVENTION: Cystic Fibrosis Gene

NUMBER OF SEQUENCES: 43

CORRESPONDENCE ADDRESS:

ADDRESSEE: STERNE, KESSIER, GOLDSTEIN & FOX P.L.C. CITY: Washington

CITY: Washington

STATE: DC
                                                                                       GOLDSTEIN & FOX P.L.L.C.
                                                                                                                                                                                                                                                                                     COMPUTER REDABLE FORM:
MEDIUM TYPE: Floppy disk
MEDIUM TYPE: Floppy disk
COMPUTER REDABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/469,617
FILING DATE: 06-JUN-1995
CLASSIFICATION: 800

2 Sequence 29, Application US/08388852B

3 Sequence 29, Application US/08388852B

4 PAPLICANT: Adema, Gosse Jan, Figdor, Carl Gustav.

4 TILLE OF INVENTION: Melanoma associated antigenic polypeptide,

7 TILLE OF INVENTION: epitopes thereof and vaccine against melanoma;

NUMBER OF SEQUENCES: 38

5 CORRESPONDENCE ADDRESS:

7 ADDRESSE: Adema, Gosse Jan; Figdor, Carl Gustav

8 STREET: Philips van Leydenlaan 25

7 CITY: Nijnegen

7 STATE: Braband

7 STATE: Braband
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Sequence 4303, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION:
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragment TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prefitte OF INVENTION: and treatment of infection
TITLE OP INVENTION: and treatment of infection
FILE REFRENCE: 9710-003-999
CURRENT APPLICATION
CURRENT PILING DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
ID NO 4303
ID NO 4303

US-09-198-4224-4963

Sequence 4963, Application US/09198452A

Patent No. 6559294

GENERAL INFORMATION:

APPLICANT: GITIFais, R.

TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prevering the Perent Policy of 1003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

TITLE REFERENCE: 910-003-999

CURRENT FILING DATE: 1998-11-24

NUMBER OF SEQ ID NOS: 6849

LENTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 22, Application US/09843376
Patent No. 6566132

Sequence 29, Application US/08361479
Patent No. 5693752
GENERAL INFORWATION:
APPLICANT: KATINGER, HERMAN; RUEKER, FLORIAN; HIMMLER,
APPLICANT: GOTTERIED; MUSTER, THOMAS; TRKOLA, ALEXANDRA; PURISCHER, MARTIN, MAIWAI
APPLICANT: GEORG; STEINDL, FRANZ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 540, Application US/09827998

Sequence 540, Application US/09827998

Patent No. 6656700

GENERAL INFORMATION:

APPLICANT: Ghamon, Mark

TITLE OF INVENTION: NOVEL ISOFORMS OF HUMAN PREGNANCY-ASSOCIATED PROTEIN E

TITLE OF INVENTION: NOVEL 180/09/827,998

CURRENT FILING DATE: 2001-04-06

CURRENT FILING DATE: 2000-05-26

PRIOR PAPLICATION NUMBER: US 60/236,359

PRIOR FILING DATE: 2000-09-27

NUMBER OF SEQ ID NOS: 1881

SOFTWARE: Acomica Sequence Listing Engine

SEQ ID NO 540

LENGTH:: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Score 13; DB 1; Length 17;
